## EXPLANATION

1. Orange lines indicate location of roads already in and maintained by oil companies operating in the area.
2. Numbered squares indicate 40-acre parcels contained in Mineral Lease 26607.
3. Black lines show location of vein.
4. Small black square on spur vein (SE 1/4 of NE 1/4 of Sec. 26) is the location selected for sinking the first vertical shaft.
5. No additional roads required other than existing roads.
6. Grading and loading equipment, generator, hoist house, and office will be set up near the vein and just off the east-west road.
7. The main shaft will be sunk to a depth of 300 feet and gilsonite mined in both directions in the vein from the shaft. No gilsonite will be removed in the top 25 feet of the vein. Additional shafts will be sunk at approximately 250 feet with spacing along the vein as required by law.
8. Site preparation requires no removal of vegetation. There are no trees within 5 miles of the site. No leveling or surface earth removal except for footings for small buildings and headframe base. The only excavation will be a 30" x 15' shaft opening as required by law. No top soil will be removed.
9. Materials removed in the process of sinking the shaft will be deposited in a trench and covered over with dirt (if necessary).
10. No alkali-producing or toxic materials will be involved. Gilsonite is a solid hydrocarbon.
11. Disturbed materials include only sandstone and gilsonite which need no special stabilization.
12. We do not intend to grade, regrade or in any way disturb the surface of the earth except as listed above. Drainage will not be altered.
